Quality WORKING AT HEIGHTS Training

IT'S THE LAW!

Need to get into compliance fast? WHSC CAN HELP!

Falls from heights are the leading cause of traumatic worker deaths and critical injuries in construction. To help put a stop to this unacceptable situation, **new regulatory changes in Ontario** require employers to ensure untrained or inadequately trained construction workers complete a Ministry of Labour (MOL)-approved, working at heights training program before they can work at heights and use fall protection equipment and systems. This requirement came into force **April 1, 2015**. Fall protection includes travel restraint systems, fall restricting systems, fall arrest systems, safety nets and work belts or safety belts.

WHSC *Working at Heights* training was one of the first to receive **MOL approval**. Our comprehensive one-day course is designed to ensure critical learning takes place. After successfully completing our program, participants receive a WHSC record of training card valid for three years. And because WHSC keeps all records of training, WHSC can provide replacement cards and complete training transcripts upon request.

REGISTER NOW!

WHSC is ready to meet the tremendous demand for this potentially **life-saving training**. We are running *Working at Heights* training programs province-wide, adding courses as existing ones fill. To help ensure access, **we offer this training at the affordable price of $90** (plus HST) per participant. With enough participants and an appropriate training venue, WHSC can also deliver training on site.

To learn more:
Visit **www.whsc.on.ca**
or
Call **1-888-869-7950** and ask to speak to a training services representative.

Scheduled courses are offered in English.
Should you require training in another language, please contact a WHSC training services representative.
