

# CPR/AED LEVEL C

## RECERTIFICATION

Cardiopulmonary resuscitation (CPR) can help save the life of another person. Remastering CPR through recertification is not only easy but also empowers participants to deliver effective care when assisting someone in need. Refresh knowledge on how to manage an emergency scene, how to recognize a heart attack, and how to respond when someone stops breathing.

As an approved Canadian Red Cross training partner, WHSC courses on CPR are designed to equip participants with the essential skills required to identify and respond to cardiovascular emergencies and choking incidents across all age groups – adults, children, and infants. This recertification course meets legislative requirements for provincial/territorial worker safety, insurance boards (WSIB approved) and includes the latest CPR guidelines and training in the use of an automated external defibrillator (AED).

<b>DURATION</b>	4 hours	<b>COMPLETION</b>	<ul style="list-style-type: none"> <li>▶ Attend and participate in 100% of the course</li> <li>▶ Successfully demonstrate skills and critical steps</li> <li>▶ Min 75% on written knowledge evaluation</li> </ul>
